Belgrade Regional Conservation Corps

The ***Belgrade Regional Conservation Corps*** is seeking candidate sites for its work in the coming year. The Corps mission is to reduce sources of pollution in our lakes (Great, Long, Snow, East, McGrath, North, Watson, and Ward Ponds and Salmon Lake). The Corps members will do hand work such as planting trees/shrubs, stabilizing eroding shorelines (riprap), stone lining of eroding ditches and building waterbars and turnouts on roads and drainage ways. Labor will be provided free of charge; landowners will pay for materials and any permit fees. If you know of an eroding site that needs stabilizing, let us know.

The Corps Director and the Watershed Program Coordinator are available for on-site consultations about how your property may be affecting water quality in our lakes.

NOTE: All this work will be strictly cooperative with landowners and none of these sites will be identified in any way for any kind of enforcement action. Our aim is to encourage good stewardship of the lakes we love.
